

Instructions for updating Saf-T-Log firmware via USB

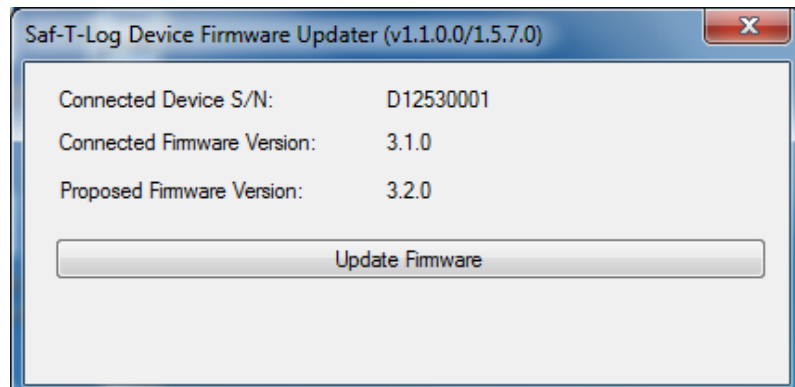

The aim is to update the firmware via USB to allow upgrades without having to return units to ETI.

Download any readings currently in the Saf-T-Log that you want to keep.

- Close the Saf-T-Log Sync program on the Task Bar Sys Tray (bottom right of desktop) [right click on the Saf-T-Log Synchronisation icon and click 'Exit'].
- Extract the zip file and run the setup.exe file.
- An icon will appear on your desktop...

- Double click the icon and the application will run...

- Connect the Saf-T-Log to the PC via the USB lead.
- The serial number of the connected Saf-T-Log will appear with the current firmware version.
- Click the 'Update Firmware button' and wait for the update to complete. **DO NOT UNPLUG THE SAF-T-LOG WHILE UPGRADING.**
- Now turn the synchronisation back on by going to the start icon, all programs, ETI Ltd folder, and click on 'Saf T Log Synchronisation'. You should now have your icon back in the Task Bar Sys Tray (bottom right of desktop)
- Click 'OK' in the reconfiguration box that appears, and select a file to send to the Saf-T-Log.
- Click the 'Yes' button to confirm the sending of the checklist.
- Once the checklist has been sent you may unplug the USB lead from the Saf-T-Log.

Device Firmware upgrade is complete!
